which shares sequence is come autoning moves manue proteins. Galanins are biologically active peptides that are present in the central and peripheral nervous system and are upregulated after spinal injury and in response to cestrogen. NHP is useful for diagnosis, drug screening, in response to costrogen. NHP is useful for diagnosis, drug screening, clinical trial monitoring and treatment of physiological disorders and imbalance. Galanins have been associated with for example regulating body weight, modulating behaviour, treating pain, inflammation, neuronal repair, Alzheimer's dementia, inflammatory bowel disease and infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; nootropic; neuroprotective; antimicrobial; antiinflammatory; analgesic; anoretic; antianoretic; therapy; novel human protein; NHP; galanin; drug screening; physiological disorder; body weight regulation; behaviour modulation; pain; inflammation; neuronal repair; Alzheimer's dementia; inflammatory bowel disease; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid sequence encoding a protein similar to proteins of the galanin family, useful for screening for molecules with therapeutic, diagnostic and pharmacogenic applications -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /*tag= a

which shares sequence similarity with galanin proteins. Galanins are biologically active peptides that are present in the central and peripheral nervous system and are upregulated after spinal injury and in response to oestrogen. Nip is useful for diagnosis, drug screening, clinical trial monitoring and treatment of physiological disorders and imbalance. Galanins have been associated with for example regulating body weight, modulating behaviour, treating pain, inflammation, neuronal repair, Alzheimer's dementia, inflammatory bowel disease and infectious
                                                                                                                                                                                                                                                   New nucleic acid sequence encoding a protein similar to proteins of the galanin family, useful for screening for molecules with therapeutic, diagnostic and pharmacogenic applications -
                                                                                                                                                                              Sands AT;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes peptides (I) binding to galanin receptor proteins. (I) contain the sequence APAHRGRGG or one substantially identical to it, and their precursors, sailts, amides and esters, which bind especially to rat galanin receptor proteins. Products from the present invention are used in assays of galanin/galanin receptor binding and the development of furgs acting on galanin/galanin receptor binding function improvers, appetite improvers, and function regulators for the womb, kidney, prostate, testis or skeletal muscle. AAV45129 to AAV45154 and AAZ25518 to AAX2552 represent sequences used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptides binding to galanin receptor proteins, used to, e.g. improve
                                                                                                                                                                                                                                                      Physiologically active peptide; receptor binding; galanin receptor; GALR1; GALR2; GALR3; chymotrypsin; ligand; preprogalanin; galanin; drug development; memory function; appetite improver; womb; kidney;

```
proteins. (I) contain the sequence APAHRGRGG or one substantially identical to it, and their precursors, salts, amides and esters, which bind especially to rat galanin receptor proteins. Products from the present invention are used in assays of galanin/galanin receptor binding and the development of drugs acting on galanin binding, such as memory function improvers, appetite improvers, and function requlators for the womb, kidney, prostate, testis or skeletal muscle. The present invention describes peptides (I) binding to galanin receptor proteins. (I) contain the sequence APAHRGRGG or one substantially identical to it, and their precursors, salts, amides and esters, which bind especially to rat galanin receptor proteins. Products from the present invention are used in assays of galanin/galanin receptor binding and the development of drugs acting on galanin binding, such as memory function improvers, appetite improvers, and function regulators for the womb, kidney, prostate, testis or skeletal muscle. rhe present invention describes peptides (I) binding to galanin receptor proteins. (I) contain the sequence APAHRGRGG or one substantially identical to it, and their precursors, salts, amides and esters, which bind especially to rat galanin receptor proteins. Products from the present invention are used in assays of galanin/galanin receptor binding and the development of drugs acting on galanin binding, such as memory function improvers, appetite improvers, and function regulators for the womb, kidney, prostate, testis or skeletal muscle. AAX45129 to AAX45154 and AAX25518 to AAX2552 represent sequences used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pertides binding to galanin receptor proteins, used to, e.g. improve

The present invention describes peptides (I) binding to galanin receptor identical (I) contain the sequence APAHRGRGG or one substantially broteins. (I) contain the sequence APAHRGRGG or one substantially broteins in the describing to rat galanin receptor proteins. Products from the pand the development of drugs acting on galanin/galanin receptor binding function improvers, appetite improvers, and function regulators for the womb, kidney, prostate, testis or skeletal muscle. AAA45129 to AAA45154 and AAZ25518 to AAZ25522 represent sequences used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Peptides binding to galanin receptor proteins, used to, e.g. improve
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Physiologically active peptide; receptor binding; galanin receptor; GALR1; GALR2; GALR3; chymotrypsin; ligand; preprogalanin; galanin; drug development; memory function; appetite improver; womb; kidney; function regulator; prostate; testis; skeletal muscle; ss.

The present invention describes peptides (I) binding to galanin receptor proteins. (I) contain the sequence APAHRGRGG or one substantially identical to it, and their precursors, salts, amides and esters, which bind especially to rat galanin receptor proteins. Products from the present invention are used in assays of galanin/galanin receptor binding and the development of drugs acting on galanin binding, such as memory function improvers, appetite improvers, and function regulators for the womb, kidney, prostate, testis or skeletal muscle. AAV45129 to AAV45154
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Peptides binding to galanin receptor proteins, used to, e.g. improve

The present invention describes peptides (I) binding to galanin receptor proteins. (I) contain the sequence APAHRGRGG or one substantially identical to it, and their precursors, salts, amides and esters, which bind especially to rat galanin receptor proteins. Products from the present invention are used in assays of galanin/galanin receptor binding and the development of drugs acting on galanin binding, such as memory function improvers, appetite improvers, and function regulators for the womb, kidney, prostate, testis or skeletal muscle. AAY45129 to AAX45154 and AAZ25518 to AAZ25522 represent sequences used in the exemplification
                                                                                                                                                                                                                                                                                      Peptides binding to galanin receptor proteins, used to, e.g. improve

This invention relates to a method for the preparation of a physiologically active peptide having a cleaved cysteine residue at the end N-terminal, and has any of the amino acid sequences given in AAB65131 - AAB65136. The invention includes sequences AAB65137 - AAB65153 which represent proteins related to the main proteins of the invention, including aplanin receptors, and basic fibroblast growth factor. DNA sequences AAF44065 - AAF44071 and PCR primers AAF44072 - AAF44086 are used in the isolation and characterisation of DNA encoding the proteins of the invention.
                                                                                                                                Preparation of a new physiologically active peptide having a cleaved cysteine residue as N-terminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              bFGF (human fibroblast growth factor) DNA sequence SEQ ID 17.

```
physiologically active peptide having a cleaved cysteine residue at the end N terminal, and has any of the amino acid sequences given in AAB65131 - AAB65136. The invention includes sequences AAB65137 - AAB65153 which represent proteins related to the main proteins of the invention, including galanin receptors, and basic fibroblast growth factor. DNA sequences AAR44065 - AAR44071 and PCR primers AAR44072 - AAR44086 are used in the isolation and characterisation of DNA encoding the proteins of the invention.
                                                                                                                                                                                                                                                           Preparation of a new physiologically active peptide having a cleaved
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              bFGF (human fibroblast growth factor) DNA sequence SEQ ID 18.

```
physiologically active peptide having a cleaved cysteine residue at the end N-terminal, and has any of the amino acid sequences given in AAB65131 - AAB65136. The invention includes sequences AAB65137 - AAB65153 including proteins related to the main proteins of the invention, including galanin receptors, and basic fibroblast growth factor. DNA sequences AAF44065 - AAF44071 and PCR primers AAF44072 - AAF44086 are used in the isolation and characterisation of DNA encoding the proteins
                                                                                                                                                            Preparation of a new physiologically active peptide having a cleaved

The present invention describes peptides (I) binding to galanin receptor proteins. (I) contain the sequence APAHRGRGG or one substantially identical to it, and their precursors, salts, amides and esters, which bind especially to rat galanin receptor proteins. Products from the present invention are used in assays of galanin/galanin receptor binding and the development of drugs acting on galanin binding, such as memory function improvers, appetite improvers, and function requiators for the womb, kidney, prostate, testis or skeletal muscle. AAV45129 to AAV45154
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Peptides binding to galanin receptor proteins, used to, e.g. improve
Physiologically active peptide; receptor binding; galanin receptor; GALRI; GALRZ; GALRZ; chymotrypsin; ligand; preprogalanin; galanin; drug development; memory function; appetite improver; womb; kidney; function regulator; prostate; testis; skeletal muscle; ss.

This invention relates to a method for the preparation of a physiologically active peptide having a cleaved cysteine residue at the end N-terminal, and has any of the amino acid sequences given in AAB65131 - AAB65137 - AAB65137 - AAB65137 - AAB65137 - AAB65137 - AAB65137 - AAB65153 including galanin receptors, and basic fibroblast growth factor. DNA sequences AAR44065 - AAF44071 and PCR primers AAF44072 - AAF44086 are used in the isolation and characterisation of DNA encoding the proteins
                                                                                                                                                                                                                                                                                                                                 Prebaration of a new physiologically active peptide having a cleaved cysteine residue as N-terminal \bar{\phantom{a}}

It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is rubitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence a soon as it is available and the accession number will be preserved.

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 (bases 1 to 66256)

ALTECT SUBMISSION

Submitted (22-JUN-2000) Production Sequencing Facility, DOB Joint Genome Institute, 2800 Mitchell Drive, Walnut Creek, CA 94598, On Jul 26, 2001 this sequence version replaced gi:13699754.

* NOTE: This is a 'working draft' sequence. It currently are represented as runs of N. The order of the pieces is a believed to be correct as given, however the sizes of the gaps between the are based on estimates that have provided by the submittor.

* This sequence will be replaced.

* This sequence will be replaced.

* This sequence will be preserved.

The present sequence is a cDNA encoding novel human protein (NHP) which shares sequence similarity with galanin proteins. Galanins are biologically active peptides that are present in the central and peripheral nervous system and are upregulated after spinal injury and in response to oestrogen. NHP is useful for diagnosis, drug screening, clinical trial monitoring and treatment of physiological disorders and imbalance. Galanins have been associated with for example regulating body weight, modulating behaviour, treating pain, inflammation, neuronal diagrams. Alzheimer's dementia, inflammatory bowel disease and infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 actccagcatccgcacctgcccaccggggacgaggaggctggaccctcaatagtgctggc 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a cDNA encoding novel human protein (NHP) which shares sequence similarity with galanin proteins. Galanins are biologically active peptides that are present in the central and peripheral nervous system and are upregulated after spinal injury and in response to oestrogen. NHP is useful for diagnosis, drug screening in response trial monitoring and treatment of physiological disorders and imbalance. Galanins have been associated with for example regulating body weight, modulating behaviour, treating pain, inflammation, neuronal repair, Alzheimer's dementia, inflammatory bowel disease and infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 actocagcatccgcacctgcccacogggacgaggaggctggacctcaatagtgctggc 120

The present invention describes peptides (I) binding to galanin receptor proteins. (I) contain the sequence APAHRGRGG or one substantially identical to it, and their precursors, salts, amides and esters, which bind especially to rat galanin receptor proteins. Products from the present invention are used in assays of galanin/galanin receptor binding and the development of drugs acting on galanin binding, such as memory function improvers, appetite improvers, and function regulators for the womb, kidney, prostate, testis or skeletal muscle. AAV45129 to AAV45154 and AAV255518 to AAV25552 represent sequences used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Peptides binding to galanin receptor proteins, used to, e.g. improve

```
The present invention describes peptides (I) binding to galanin receptor proteins. (I) contain the sequence APAHRGRGG or one substantially identical to it, and their precursors, salts, amides and esters, which bind especially to rat galanin receptor proteins. Products from the present invention are used in assays of galanin/galanin receptor binding and the development of drugs acting on galanin planding, such as memory function improvers, appetite improvers, and function regulators for the womb, kidney, prostate, testis or skeletal muscle. AAV45129 to AAV45154 and AAV25518 to AAV255252 represent sequences used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Peptides binding to galanin receptor proteins, used to, e.g. improve

bind especially to rat galanin receptor proteins. Products from the present invention are used in assays of galanin/galanin receptor binding and the development of drugs acting on galanin binding, such as memory function improvers, appetite improvers, and function regulators for the womb, kidney, prostate, testis or skeletal muscle. AAV45129 to AAV25158 to AAV2552 represent sequences used in the exemplification

The present invention describes peptides (I) binding to galanin receptor proteins. (I) contain the sequence APAHRGRGG or one substantially identical to it, and their precursors, salts, amides and esters, which bind especially to rat galanin receptor proteins. Products from the present invention are used in assays of galanin/galanin receptor binding and the development of drugs acting on galanin binding, such as memory function improvers, appetite improvers, and function regulators for the womb, kidney, prostate, testis or skeletal muscle. AAY45129 to AAX45154 and AAZ55518 to AAZ5552 represent sequences used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of the present invention.

Preparation of a new physiologically active peptide having a cleaved cysteine residue as N-terminal $\,$

Disclosure; Page 36; 44pp; Japanese.

This invention relates to a method for the preparation of a physiologically active peptide having a cleaved cysteine residue at the end N-terminal, and has any of the amino acid sequences given in AAB65131 - AAB65136. The invention includes sequences AAB65137 - AAB65153 including galanin receptors, and basic fibroblast growth factor. DNA sequences AAF44065 - AAF44071 and PCR primers AAF44072 - AAF44086 are used in the isolation and characterisation of DNA encoding the proteins of the invention.

Peptides binding to galanin receptor proteins, used to, e.g. improve kidney functioning

Claim 13; Page 136; 153pp; Japanese.

The present invention describes peptides (I) binding to galanin receptor proteins. (I) contain the sequence APAHRGRGG or one substantially identical to it, and their precursors, salts, amides and esters, which bind especially to rat galanin receptor proteins. Products from the present invention are used in assays of galanin/galanin receptor binding and the development of drugs acting on galanin binding, such as memory function improvers, appetite improvers, and function requlators for the womb, kidney, prostate, testis or skeletal muscle. AAV45129 to AAV45154 and AAZ25518 to AAZ2552 represent sequences used in the exemplification of the present invention.

ö
bind especially to rat galanin receptor proteins. Products from the present invention are used in assays of galanin/galanin receptor binding and the development of drugs acting on galanin binding, such as memory function improvers, and function regulators for the womb, kidney, prostate, testis or skeletal muscle. AAV45129 to AAV45154 and AAZ25518 to AAZ2552 represent sequences used in the exemplification
